Energy Policy

As Nurol Holding, we create solutions for our employees and stakeholders, and we are committed to the following for the services we offer to achieve both environmental and economic benefits and support development:

- Always adhering to legal requirements and reducing energy costs by adapting energy-efficient and low-operating-cost technologies with existing successful practices,
- Continuously striving to reduce energy consumption and improve energy efficiency,
- Adopting energy-saving technologies and practices by reviewing our business processes,
- Continuously improving and evaluating our performance in accordance with the national and international standard requirements of the Energy Management System,
- Offering training to our staff on energy-saving and efficiency, and raising their awareness on energy efficiency practices,
- Ensuring full compliance with environmental and legal requirements in all our energy-related activities,
- Communicating effectively with all our stakeholders on issues related to Energy Management to create shared value and beneficial results,
- Contributing to sustainable production by following technological advancements and innovations, purchasing energy efficient products and services, and ensuring energy and material efficiency,
- Providing information and support to our stakeholders in their efforts on energy efficiency and raising their awareness on this issue.

As Nurol Holding, we are committed to raising public awareness through sharing our Energy Management Policy, enhancing sustainability in our operations, and conducting activities in compliance with national and international legal regulations within a continually improving Energy Management System, supported by necessary resources.
